Finding **Literature Review** articles:

1) EBSCO databases (e.g. Academic Search Premier; CINAHL Complete; MEDLINE Complete; PsychINFO; Health Source: Nursing/Academic Edition)

The subject term, literature review, is recognized in the above EBSCO databases. To find a review article (articles that sum up the current state of the research on a particular topic), conduct a search populating one search box with “literature review” as a subject term. A second box may be filled using the ergogenic aid you are researching.

2) Wiley Interscience

There is no subject limiter in Wiley, so “literature review” is best searched in All Fields. Using quotation marks will return only results that have those words together. Try searching the ergonomic aid in the abstract, the assumption being that if the term appears there it is significant.
